Profile

Self-taught Software Engineer focused on building fast, scalable, and user-friendly Web & Mobile applications. I can turn the product ideas into production-ready solutions by using the modern JavaScript/TypeScript frameworks, optimized backend services, and clean UI/UX. I ship real features, solve real problems, and constantly push my skills forward with the latest tools in Full Stack, Cloud, and AI-driven development.

Education

Pillai HOC College of Engineering and Technology <i>Bachelor of Engineering in Computer Engineering</i>	11/2022 – 05/2025 Khalapur, Raigad
Pillai HOC College of Engineering and Technology <i>Diploma in Computer Engineering</i>	06/2019 – 06/2022 Khalapur, Raigad

Skills

• HTML5	• CSS3	• JavaScript	• TypeScript
• Python	• Dart	• C++	• React
• Next.js	• Tailwind CSS	• Node.js	• Express
• FastAPI	• REST APIs	• GraphQL	• React Native
• Expo	• Flutter	• MySQL	• PostgreSQL
• MongoDB	• SQLite	• Redis	• Firebase

Professional Experience

Vserv Digital Services Pvt. Ltd. <i>Software Engineer</i>	08/2025 – 12/2025 Mumbai, Maharashtra, India
• Build responsive and modern user interfaces using HTML5, CSS, Tailwind CSS, and JavaScript with a focus on clean UX and performance. • Develop dynamic, component-driven frontends using React.js for scalable feature delivery and faster UI updates. • Design, query, and optimize relational databases in MySQL to ensure fast and reliable data operations. • Create and integrate REST APIs for smooth communication between client-side and backend services. • Containerize and deploy applications using Docker to maintain consistency across development and production environments. • Perform testing, debugging, and performance optimization to ensure smooth functionality and maintain code quality.	

Projects

ChatMate – Your On-the-Go AI Companion

A full-stack AI chatbot app enabling real-time, intelligent conversations across mobile platforms.

- Built a cross-platform AI chatbot for iOS & Android with real-time intelligent responses, leveraging OpenAI APIs for context-aware and conversational output.
- Designed an adaptive and visually smooth UI using React Native with Tailwind-RN styling, including dark/light modes and consistent component behavior across devices.
- Integrated a FastAPI backend for secure API routing and improved handling of responses, optimizing network performance and reducing latency in message delivery.

MeetNexa – Connect Visually, Anywhere

A full-stack video conferencing app with real-time chat, screen sharing, and peer-to-peer connectivity.

- Built a modern web-based meeting platform with video calling, chatting, and collaboration features using Next.js and responsive UI with Tailwind CSS.
- Managed global state using Zustand for smooth interactions and consistent user experience across meeting views and chat systems.
- Implemented secure authentication and real-time communication features using Firebase services for storage, user access, and chat syncing.
- Developed Node.js backend APIs to handle meeting creation, joining, and data exchange, ensuring reliable and scalable communication flows.

Zer0Drop – Censorship-Free File Exchange

A decentralized file sharing platform for censorship-resistant, permanent, and secure file exchange.

- Built a fast and responsive file-sharing web app using Next.js for a smooth client experience and Tailwind CSS for modern UI design.
- Developed secure upload/download flows using Node.js + Express APIs, ensuring reliable data handling and access control for shared files.
- Integrated AWS S3 storage to store and deliver files efficiently, with signed URLs and restricted permissions for privacy and security.

Chatterly – Real-Time Conversations Made Simple

A mobile-first chat platform for seamless real-time messaging and media sharing.

- Built a feature-rich messaging app with one-to-one and group chats, media sharing, and push notifications for real-time engagement.
- Designed a responsive, polished UI using Expo + Tailwind-RN, with Redux Toolkit managing chat state across screens smoothly.
- Implemented Firebase Authentication and Firestore real-time syncing, enabling secure login and instant message delivery across devices.
- Enhanced reliability with offline support, chat persistence, and scalable cloud infrastructure backed by Firebase services.

BitPad – Fast, Collaborative Online Coding

A web-based code playground for writing, running, and sharing code collaboratively.

- Developed a browser-based collaborative code editor that enables real-time editing and seamless teamwork on shared code snippets.
- Built an IDE-style interface with React and Tailwind CSS, supporting multiple languages and live state sync across users.
- Architected secure code execution environments using Docker containers, managed by a FastAPI backend to handle execution requests efficiently.
- Used PostgreSQL for storing projects, sessions, and user data, ensuring fast retrieval and persistence across active collaborations.
